

Direct CD/DVD Multiplexer

DPM88

Simultaneous multi-CD/DVD master creating system for "PlayStation® 2"

Simultaneous duplication of multiple CD/DVD master discs for "PlayStation 2"

*Compatible with "CD/DVD-ROM Generator DTL-S15000" for "PlayStation 2"
manufactured by Sony Computer Entertainment Inc.*

Supports simultaneous verification of a multiple number of discs

CD version connectable to DSR-8000cs, and DVD version connectable to DSR-8000dp

DPM88

Simultaneous multi-CD/DVD master creating system for "PlayStation® 2"

Shorten the time for master disc production to as little as 1/9th of normal production time!

Hoei Sangyo's "PlayStation" master disc creation tool, "DPM44+CD duplicator: SR-4400cs," has been used widely in Japan as well as around the world. To respond to the growing demand for a model compatible with "PlayStation 2", Hoei Sangyo has developed and introduced its successor, the DPM88.

The Production of master discs for "PlayStation" software is a long, laborious process. Since "PlayStation 2" uses DVD media, the increased data capacity requires even more time for master disc production. By using DPM88, you can produce multiple master discs simultaneously and cut your production time to 1/9th of the ordinarily required.

The new DPM88 is easy to use. By connecting the SCSI card to a master data PC, installing the DPM88 application program, and hooking up the DSR-8000cs/dp, the DPM88 can produce up to four master discs simultaneously with a single operation.

After the conventional master disc production procedures are completed, simply start the produced file using the DPM88 application program and click the Start button.

By inserting the VMI (Versatile Media Interface)™ card*1 developed originally by Hoei Sangyo into the DSR-8000, a maximum of three expansion units can be connected for simultaneous operation of up to 20*2 drives. The VMI extension function can be also used to process eight master discs in a single operation.

*1 Option *2 When CD-R drives are used. Maximum of 16 units can be connected when DVD-R drives are used.

The screenshot shows the DPM88 SYSTEM application window. Callouts point to the following features:

- Process mode:** Changeable to copy, verify or copy + verify modes.
- Media type:** Supports CD-R and DVD-R.
- Progress status of process display:** Displayed by bar-graph, percentage and number of blocks.
- Process result:** Error code and the writer with error on the screen.
- Write method:** Changeable from copy or simulation modes.
- Number of writer:** Number of working writer/ connected writer on the screen.
- Location of master file:** With directory.

System requirements

Host PC	PC/AT compatible
OS	Windows® 95/98/NT/2000 NT 4.0 SP 5.0 or later
CPU	Intel Pentium III 500MHz or faster
Memory	more than 128MB
SCSI card	Adaptec 2940AU recommended
	CD/DVD-ROM Generator DTL-S15000 ver 1.0 or later
